

AMENDMENTS TO CLAIMS:

Agent for Applicant respectfully requests the following amendments to the claims without adding any new subject matter. Additions are shown in underlining, while deletions are shown in strikethrough or double square brackets.

1. [Currently Amended] A member selected from the group of members consisting of a chair member, a bed member and a lounge member, said member having:

(a) moving parts,

(b) controls for the moving parts; and

(c) information output circuitry sensors which signal feedback mechanisms to outputs instructive information regarding the operation of the controls for the moving parts,

(d) a power pack;

and ~~an~~ one or more energy converters which converts energy to which the member is exposed to electrical energy, ~~for powering said information output circuitry to generate information, regarding the operation of the controls for the moving parts.~~

wherein said one or more energy converters is connected to the power pack whereby electrical energy flows from the one or more energy converters into the power pack and may be stored therein or utilized for powering said sensors, feedback mechanisms and controls for the moving parts.

2. [Original] A member as claimed in Claim 1 wherein said energy converter comprises a solar panel provided on an exposed surface of said member.

3. [Currently Amended] A member as claimed in Claim 2 further including ~~wherein said information output circuitry is further linked to~~ a biorhythm sensor.

4. [Currently Amended] A member as claimed in Claim 3 including a digital display also powered by said one or more energy converters and displaying information from said biorhythm sensor.

5. [Currently Amended] A member as claimed in Claim 1 wherein said member comprises a chair and said one or more energy converters operable to converts motion of a moveable portion of the chair to electrical energy.

6. [Currently Amended] A member selected from the group of members consisting of a chair member, a bed member and a lounge member, said member includes ing an information output device which upon receiving an activation signal from a member sensor, outputs instructional information concerning the operation of said member, an energy converter which converts energy to which the member is exposed to electrical energy for powering said information output device, wherein said member comprises a chair and said information output device further comprises a control for a moveable part of said chairmember, once activated, said control outputs a signal to the information output device which outputs member positional information ting information regarding directions to the use of said control without producing movement[[s]] of the chair, one or more energy converters which convert energy to which the member is exposed to electrical energy which flows to a power pack and is utilized for powering said information output device.

7. [Currently Amended] A member as claimed in Claim 6 wherein said control provides information output device provides audio feedback, providing the directions for use of said control.

8. [Currently Amended] A member as claimed in Claim 6 including a visual display also powered by said energy converter, wherein said information output device provides said visual display visually displaying the feedback using the visual display, directions for use of the control.

9. [Currently Amended] A member as claimed in Claim 1 ineluding wherein the power pack is an electrical rechargeable power pack which is charged by said one or more energy converters, said power pack storing the electrical energy and dispersing the electrical energy as required.

10. [Previously Presented] A member as claimed in Claim 1 wherein said member comprises a chair having rolling casters for generating said electrical energy.

11. [Previously Presented] A member as claimed in Claim 1 wherein said member comprises a chair and said chair has a back and seat and a moveable hinge between said back and seat for generating said electrical energy.

12. [Previously Presented] A member as claimed in Claim 1 further having electrically operated body repositioning means powered by said energy converter, or rechargeable power pack.

13. [Previously Presented] A member as claimed in Claim 12 wherein said member comprises a chair and said body repositioning means comprises a lumbar adjustment member, and said chair further includes an electrically generated timer which provides timed interval repositioning of said lumbar adjustment members.

14. [Cancelled]

15. [Cancelled]

16. [Currently Amended] A chair having electrical power requirements including information output circuitry for generating information regarding directions to the use thereof controls for the electrical power requirements, and a generator carried by said chair for converting energy to which the chair is exposed to electrical energy for powering said electrical power requirements, whereby said generator converts motion of said chair to said electrical energy for meeting said electrical power requirements, and wherein said chair includes moveable casters and said generator is disposed in said casters for converting motion of said casters to said electrical energy for powering said information output circuitry to generate information regarding the use of the controls for the electrical power requirements.

17. [Cancelled]

18. [Cancelled]

19. [Previously Presented] A chair as claimed in claim 16, further including a rechargeable battery carried by said chair, wherein said generator recharges said battery, said battery powering said electrical power requirements of said chair.

20. [Previously Presented] A chair having an electronic display for displaying information concerning controls for moving the chair comprising:

- (a) a rechargeable battery carried by said chair for powering said electronic display;
- (b) solar power means carried by said chair for:

- (i) providing power to said electronic display to display said information concerning the controls for moving the chair; and
 - (ii) recharging said rechargeable battery;
- (c) chair movement generator means for:
- (i) providing power to said electronic display to display said information concerning controls for moving the chair; and
 - (ii) recharging said rechargeable battery;

wherein said rechargeable battery provides power to said electronic display for displaying said information.

21. [Previously Presented] A chair comprising:

- (a) an information output device which outputs information concerning controls for moving the chair; and
- (b) rolling casters for generating electrical energy for powering said information output device.

22. [Currently Amended] A chair comprising:

- (a) an information output device which outputs instructive information concerning the use of thechair controls;
- (b) an energy converter; and
- (c) a moveable hinge linked to said energy converter for generating electrical energy in response to movement;

wherein said energy converter converts energy for powering said information output device so as to output information concerning the use of the chair controls.

23. [Previously Presented] A chair as claimed in Claim 22 wherein said chair has a back and a seat and said moveable hinge is located between said back and said seat for generating said electrical energy.

24. [Cancelled]

25. [Currently Amended] A member selected from the group of members consisting of a chair member, a bed member and a lounge member, said member including moving parts and controls for the moving parts, and information circuitry which outputs instructional information

regarding the~~about~~ operation of the controls and an energy converter disposed on operation of the controls for converting energy to which the member is exposed to electrical energy for powering said information circuitry, said moving parts and said controls for the moving parts. to generate information regarding the operation of the controls for the moving parts.

25.26. [Currently Amended] A member as claimed in claim 1 wherein said energy connector convertor powers the moving parts and the controls for the moving parts.

27. [New] A member as claimed in claim 1 wherein said feedback mechanism is of an audible form.

28. [New] A member as claimed in claim 1 wherein said feedback mechanism is of a visual form.

29. [New] A member selected from the group of members consisting of a chair member, a bed member and a lounge member, said member including moving parts and controls for the moving parts, a power pack, and an energy converter connected to the power pack and the controls for converting energy to which the member is exposed to electrical energy for powering the controls, or for storage of electrical energy to the power pack.
